

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently amended) A form panel for placing concrete made of plastic comprising:

a hollow sheathing section, one side of which forms a concrete placing surface, and hollow side panel sections bent out at right angles from both side edges of said sheathing section on an opposite side of said sheathing section to said concrete placing surface,

wherein ~~at least one~~ two hollow projecting sections, which extends in a vertical direction, ~~is~~ are provided on both side edges of an outside surface of at least one of said side panel sections, and

one of the sides surfaces of one of said two hollow projecting sections provided on said sheathing section side, which faces said concrete placing surface of said sheathing section, is coplanar with said concrete placing surface of said sheathing section.

2. Canceled.

3. (Currently amended) A ~~The~~ form panel for placing concrete according to claim 1, wherein ~~two projecting sections which extend in a vertical direction are provided on an outside surface of at least one of said side panel sections,~~

one of the sides surfaces of ~~one of~~ said two hollow projecting sections, ~~is coplanar with said concrete placing surface of said sheathing section, and the side of the other projecting section which faces~~ each other, ~~said first projecting section~~ is inclined.

4. (Currently amended) A ~~The~~ form panel for placing concrete according to claim 1, wherein said sheathing section and said side panel sections are formed by integrating two panels and a plurality of long reinforcing ribs connecting these panels.

5. (Currently amended) A ~~The~~ form panel for placing concrete according to claim 4, wherein a diagonal rib which is diagonal relative to said concrete placing surface is formed within said two hollow projecting sections, and in contact with an inside of a corner section on said concrete placing surface side.

6. (Currently amended) A ~~The~~ form panel for placing concrete according to claim 1, wherein said two hollow projecting sections are made of a soft resin or a semi hard resin.

7. (Currently amended) A ~~The~~ form panel for placing concrete according to claim 1, wherein notches which are orthogonal to the longitudinal direction of said two hollow projecting sections are formed in the same position in each of said two hollow projecting sections.

8. (Currently amended) A ~~The~~ form panel for placing concrete according to claim 1, wherein a hollow reinforcing panel section which is parallel to said side panel sections is provided on an opposite side of said sheathing section ~~a rear surface of~~ to said concrete placing surface of said sheathing section.

9. (Currently amended) A ~~The~~ form panel for placing concrete according to claim 1, wherein said sheathing section is transparent or semitransparent.

10. (New) The form panel for placing concrete according to claim 1, wherein said form panel is configured to form spaces between adjacent form panels for conserving leaked concrete, said spaces being formed by setting outer surfaces of said two hollow projecting sections in abutting contact with the outer surfaces of two other hollow projecting sections which extend in a vertical direction provided on both side edges of the outside surfaces of the side panel sections of adjacent form panels for placing concrete.

11. (New) The form panel for placing concrete according to claim 3, wherein said form panel is configured to form spaces between adjacent form panels for conserving leaked concrete, said spaces being formed by setting outer surfaces of said two hollow projecting sections in abutting contact with the outer surfaces of two other hollow projecting sections which extend in a vertical direction provided on both side edges of the outside surfaces of the side panel sections of adjacent form panels for placing concrete, and further wherein a portion of said space for

conserving leaked concrete is formed as a V-shaped groove when viewed in cross-section and acts as a guiding groove for a tip of a drill used when forming an insertion hole for inserting a separator.
